Que es @MongoDB

'MongoDB (from "humongous") is an open-source document database, and the leading NoSQL database. Written in C++.' https://www.mongodb.org/

'MongoDB was not designed in a lab. We built MongoDB from our own experiences building large-scale, high availability, robust systems...' Eliot Horowitz, CTO and Co-Founder

NOSQL

En informática, NoSQL (a veces llamado 'no sólo SQL') es una amplia clase de sistemas de gestión de bases de datos que difieren del modelo clásico del sistema de gestión de bases de datos relacionales (RDBMS) en aspectos importantes, el más destacado que no usan SQL como el principal lenguaje de consultas. http://es.wikipedia.org/wiki/NoSQL/

NOSQL

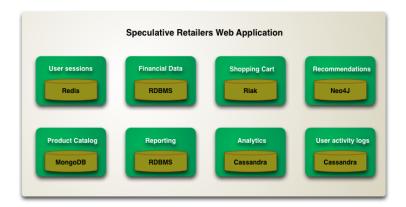

Las características comunes de las bases de datos NoSQL son:

- No utilizan el modelo relacional.
- Corren bien en clusters.
- Open-source.
- sin esquemas.
- El resultado mas importante del aumento de las bases de datos NoSQL es la Persistencia Poliglota.
